

Indian Institute of Technology (Indian School of Mines) Dhanbad

Quiz 1

Computer Programming (NCSV101)

Monsoon 2025-26

Name: _____

Admission Number: _____

Section: _____

Instructions:

1. The duration of the test is **15 minutes**. The Maximum Marks for the test is **10**.
2. There are a total of **10 questions** in this Question Paper. All Questions are compulsory.
3. **Circle** the correct option or write the correct answer in the space provided.
4. Use a **PEN** for answering. Answers in **PENCIL** will not be considered.
5. All questions carry equal weight. There is **no negative marking**.
6. Ensure that you have written your Admission Number and Section on all the pages.

1. (1 point) Which of the following statements about the modulus (%) operator in C is correct?

- A. It can be used with both integers and floating-point operands.
- B. It returns the remainder after dividing two integers.
- C. It always returns a floating-point value.
- D. It can be used only with unsigned integers.

2. (1 point) What will be the output of the following code?

```
int a = 5, b = 10;  
int x = (a > b) ? a : b;  
printf("%d", x);
```

- A. 5
- B. 10
- C. 0
- D. Undefined behavior

3. (1 point) How many times will `printf("* ");` execute?

```
int i = 1, j = 1;  
while (i <= 3) {  
    while (j <= 3) {  
        if (j % i == 0)
```

```
        break;
    printf("* ");
    j++;
}
i++;
}
```

- A. 0
- B. 1
- C. 2
- D. Infinite loop

4. (1 point) What is the output of the following code?

```
#include <stdio.h>
int main() {
    int a = 0;
    int b = (a == 1) ? 5 : (a == 0) ? 10 : 15;
    printf("%d", b);
    return 0;
}
```

- A. 5
- B. 10
- C. 15
- D. Compilation error

5. (1 point) Which of the following is a valid variable declaration in C?

- A. int 2num;
- B. double rate_of_interest;
- C. char _9name;
- D. float case;

6. (1 point) What is the output of the following code?

```
#include <stdio.h>
int main() {
    int i = 0;
    while (i < 3){
        printf("%d ", ++i);
    }
    return 0;
}
```

- A. 0 1 2
- B. 0 1 2 3
- C. 1 2 3
- D. 1 2 3 4

7. (1 point) What is the output of the following code?

```
#include <stdio.h>
int main(void) {
    int n = 3;
    switch (n) {
        case 0:
        case 1:
            printf("low");
        case 2:
        case 3:
            printf("mid");
            break;
        default:
            printf("high");
    }
    return 0;
}
```

- A. low
- B. mid
- C. low mid
- D. mid high

8. (1 point) What is the output of the following code?

```
#include <stdio.h>
int main(void) {
    int i = 2;
    int a = i++;
    int b = --i;
    printf("%d %d %d", i, a, b);
    return 0;
}
```

- A. 2 3 3
- B. 2 2 3
- C. 2 2 2
- D. 2 3 2

9. (1 point) What is the output of the following code?

```
#include <stdio.h>
int main()
{
    printf("%d", 'a'-'z');
}
```

- A. Compilation Error
- B. -26
- C. 26
- D. -25

10. (1 point) What will be the output of the following code?

```
#include <stdio.h>
int main() {
    int x = 5, y = 10;
    if (x > 0)
        if (y < 5)
            printf("Case 1\n");
        else
            printf("Case 2\n");
    return 0;
}
```

- A. Case 1
- B. Case 2
- C. No output
- D. Compilation error

For Rough Work
