

End Semester Examination- Monsoon 2025-26
NHSA 103 Understanding Human Behaviour

24th November 2025

Instructions:

1. All the questions are compulsory
2. Marks are indicated against each question. Total marks is 50.
3. There are 4 parts (A, B, C, D). All parts need to be answered separately. Start each part from a fresh page.
4. If a question mentions word limit, it must be followed.
5. Time limit is 2 hours.

PART A

1. a) What is the difference between delusion and hallucination? (1 mark)
b) What are the different subtypes of delusions in delusional disorder? (3 marks)
c) Mention in detail the two main domains of negative symptoms in schizophrenia. (4 marks)
2. a) With the help of examples, explain briefly any two cognitive biases/errors that maintain the negative cognitive triad. (2 marks)
b) Mention any five symptoms that occur during manic episodes. (2.5 marks)

PART B

1. a. You bought a non-refundable movie ticket, but realized in 30 minutes that you don't enjoy the film. Because you already paid, you decide to stay and watch it until the end. Which cognitive bias explains this behavior? (1 mark)
b. What is hindsight bias? Explain with an example. (1.5 mark)
2. Explain the function of the Autonomic Nervous System (ANS). Describe any two symptoms associated with activation of sympathetic and parasympathetic branches. (5 marks)
3. Explain in detail the experiment on hemispheric lateralization related to global and local processing of visual stimuli. (5 marks)

PART C

Q1. What is person perception? (0.5 marks)

Discuss any three rules of person perception with an example each. (3x2=6 marks)

Q2. Discuss based on social dominance theory:

- a) Legitimizing myth
- b) Benevolent paternalism

Provide examples for each. (3x2=6 marks)

PART D

(1x4 = 4 marks)

Q1. A social psychologist examines how attachment style relates to loneliness among young adults. In the study, Riya, a 23-year-old college student, frequently worries that her partner may lose interest in her and seeks constant reassurance through messages and calls. When her partner asks for personal space, she interprets it as rejection and feels deeply hurt. Although Riya has many friends, she often feels that no one truly understands her or provides the emotional closeness she desires.

Attachment style is defined as “the characteristic way in which individuals form and maintain emotional bonds in close relationships” and is measured using the Experiences in Close Relationships–Revised (ECR-R) questionnaire. Loneliness is defined as “the distress resulting from the discrepancy between desired and actual relationships” and is measured using the De Jong Gierveld Loneliness Scale.

Based on the above scenario,

- a) Identify Riya's attachment style.
- b) Identify the type of loneliness experienced by Riya.
- c) Provide the operational definition for the attachment style.

d) Provide the operational definition for loneliness.

(2x2 = 4 marks)

Q2. A study aims to find out whether daily smartphone use affects sleep quality among college students. Students report how many hours per day they use their smartphones. Their sleep quality is measured using the Pittsburgh Sleep Quality Index (PSQI), which asks questions like how easily they fall asleep, how often they wake up at night, and how refreshed they feel in the morning. The PSQI gives a total score ranging from 0 to 21, where higher scores mean poorer sleep quality.

Based on the above scenario,

- ~~PCST~~
- a) Identify the independent variable and the dependent variable.
 - b) What are the scales of measurement for the independent and dependent variables, and why?

(4.5 marks) [Max. word limit = 75 words]

Q3. Illustrate, with the help of a diagram, the processes involved in the Loneliness Loop.
